

V-PRP Shot

What Are the Benefits of the V-PRP Shot:

- Greater arousal from clitoral stimulation.
- Younger, smoother skin of the vulva (lips of the vagina).
- A tighter introitus (vaginal opening).
- Stronger orgasm.
- More frequent orgasm.
- Increased sexual desire.
- Increased ability to have a “vaginal orgasm”.
- Increased natural lubrication.
- Significantly reduces urinary incontinence.

Are There Any Side Effects?

The V Shot is a very safe procedure in general. There are complications associated with any procedure involving a needle such as bruising, swelling, possible hematoma.

Is It Painful?

The procedure is actually completely painless using our proprietary topical numbing cream.

What to Expect After Treatment:

Immediately following the procedure, the most commonly reported temporary side effects are redness, swelling, bruising, tenderness, tingling, numbness, lumpiness, and/or a feeling of pressure or fullness at the injection sites and/or in the treated area(s). Cold gel packs/ice may be gently applied immediately after treatment to reduce swelling. Swelling and redness generally subsides within 24 hours.

To Maximize Results and Prevent Complications:

Avoid direct high heat (sun exposure, sauna, hot baths, steam room, very hot shower, hot yoga, strenuous exercise etc.) for 24 hours after treatment.

You CAN have intercourse the day of the procedure.

Follow Up Appointment:

Most patients see improvement within 2 to 4 weeks with continued improvement for up to 12 weeks.

Maintenance Treatments:

The results of PRP therapy can last up to 2 years, but results vary and research documenting the longevity of the results is ongoing. Maintenance treatments are recommended every 6 to 12 months.

Please call our office if you have any additional questions after the procedure.
